

Quick Jack Portable Car Lift Vehicle Automotive Lifting System 5,000 Lb Capacity

For Sale \$1000 or Best Offer

Revolutionize the way you get your car in the air with the QuickJack BL-5000SLX portable car lifting system, which eliminates struggling with ramps and jacks and gets your car ready for maintenance in seconds. This system is a 5,000-lb. capacity automotive lift made from the same materials you'll find in a professional shop or garage. It features durable 14-Gauge welded steel frames, quick connect hoses for quick, leak-free setup and a portable power unit; you can toss this system in your trunk or backseat when you're on the go or store it in the corner when you're not. It reaches full rise in less than minute and offers dual-locking positions of mid-level and full-rise. Boasting a 3 in. collapsed height, its low-profile jack frames fit under most race cars, and without any cross members, you can match frame positions to almost any vehicle width.

- Strong 14-Gauge welded steel frames
- Integrated power-assist canisters increase the lowering speed
- Low-profile jack frames fit under most race cars
- Power unit features a built-in hydraulic flow divider for precise equalized lifting
- Hydraulic cylinders feature integrated velocity-fuse safety valves
- Includes an eight-piece set of adjustable and stackable rubber lift blocks to support cars at precise locations for increased stability and safety
- Convenient handles allow for easy positioning of the jack frames
- From stow to go in less than 60 seconds
- Detailed installation, maintenance and safety instructions accompany each QuickJack system
- Portable power unit features a remote push-button control for simple operation
- Includes: (2) ea. jack frame assemblies, (2) ea. 150 in. hydraulic hoses, (2) ea. 14 in. aux. hoses, (2) ea. quick-mount handles, (4) ea. 1.5 in. x 3 in. x 4 in. rubber lifting blocks, (4) ea. 3 in. x 3 in. x 4 in. rubber lifting blocks, (1) mini hydraulic power unit with pendant control.
- Remote pendant control features a 13 ft. cord
- Dual locking positions mid level and full rise
- A convenient metal handle keeps the power unit easily mobile
- Plugs into 110V AC wall outlet power to operate
- Extended, cantilevered rubber block trays provide increased rubber block reach
- Steel mounted urethane wheels provide effortless rolling of jack frames on floor
-
